

1) For each logic formula given in the data file, tell its 'type' (Tautology, unsatisfiable, or satisfiable).

$\text{and}(x, \text{or}(y, z))$

Satisfiable

$\text{or}(\text{and}(P, Q), Q)$

Satisfiable

$\text{imp}(\text{and}(P, Q), \text{or}(P, Q))$

Tautology

$\text{imp}(\text{and}(\text{not}(P), Q), \text{or}(P, \text{and}(Q, P)))$

Satisfiable

$\text{imp}(P, Q)$

Satisfiable

$\text{imp}(P, P)$

Tautology

$\text{imp}(\text{and}(\text{imp}(P, Q), P), Q)$

Satisfiable

$\text{and}(A, \text{and}(B, C))$

Satisfiable

$\text{and}(\text{not}(\text{or}(A, \text{and}(B, C))), D)$

Satisfiable

$\text{and}(\text{input1}, \text{or}(\text{input2}, \text{input3}))$

Satisfiable

2) For the truth table in slide 26, write its logic formula and the truth table generated by your program.

$\text{imp}(\text{and}(x, y), z)$

3) Add the algorithm assignment here.

1. Show that the following logic formulas are valid using the truth table:

◦ $P \Rightarrow P$

0 1

1 1

◦ $((P \Rightarrow Q) \wedge P) \Rightarrow Q$

0 0 1

1 0 1

0 1 1

1 1 1

2. Show that Q is the logic consequence of $\{P \Rightarrow Q, P\}$ (This is the problem 3.3 in the textbook, p. 45).

$\{P \Rightarrow Q, P\} = \neg P \vee Q \vee P = Q$
